

Seanergy

Seanergy is France's leading international event
on Offshore Renewable Energy

Since 2016, and the results of the first calls for tender in France for offshore wind power, Seanergy has been supporting the development of offshore renewable energy, bringing together a wide range of industrial, academic, institutional, and political players in the sector, and promoting them internationally.

From the very beginning, it's a cross technology event (covering fixed and floating wind power, tidal energy, wave energy, marine thermal energy (SWAC & OTEC), floating solar (FPV), salinity gradients energy and related industries such as: energy storage, digital, decarbonated maritime transports (wind-powered & hydrogen), drones or eco-designed materials...) to promote all of these and accelerate industry growth.

The event brings together 4,000 participants and 200 exhibitors, including 30% international representatives to support, gather and strengthen synergies for all the players of the offshore wind and marine renewable energy industry. Seanergy thus contributes in accelerating the industry's structuration, promoting its development in France and worldwide and, of course, supporting blue growth & ecological transition.

With the strong growth of the global offshore renewable energy market, the objectives set by the European Union and more recently by the French government, and the ongoing acceleration for this promising industry, Seanergy is an annual milestone for the industry, shaping the future of energy.

Seanergy 2024 will be held in Nantes & Saint-Nazaire, at the heart of the Pays de la Loire region, a leader in France's Offshore Renewable Energy development, offering exclusive opportunities to visit industrial and academic sites. This year's program will focus on technologies at the heart of the industry's challenges, such as floating wind and tidal power, and will continue to offer a wide range of formats to enable all international players in offshore renewable energies to benefit from business and development opportunities.

About Bluesign

Bluesign is an organisation gathering team of experts committed to the energy transition, applying their knowledge & experience in communications strategy and business networking to the development of the offshore renewable energy sector, in France and internationally.

Bluesign has created and organises Seanergy, France's international forum on Offshore Renewable Energy since 2016 and is also committed in addressing employment issues in France through Workinblue, a resource for employment-related challenges faced by stakeholders - recruitment, training, etc.

Throughout the year, Bluesign is also involved alongside industry stakeholders, providing them with guidance on their communication projects, as well as on the organization of business networking events.
